EDUCATION

University Of Mumbai

Bachelor of Science in Computer Science

Mumbai, Maharashtra, India

Aug. 2020 – Mar 2023

EXPERIENCE

Lead - DevOps and Compliance

Sept 2025 – Present

AiVANTA Technologies LLP

Mumbai, Maharashtra, India

- * Led cloud optimization initiatives and reduced overall cloud infrastructure costs by **80%** by migrating workloads to cost-efficient providers and implementing a serverless, auto-scaling architecture on **AWS, and GCP**.
- * Designed and developed Python-based automation solutions, reducing manual operational tasks by **60%** and improving system efficiency.
- * Established a scalable multi-account architecture using AWS Control Tower, enabling automated account provisioning, centralized logging, and security controls, reducing onboarding time for new environments by **75%**.
- * Enforced **IAM least privilege access** and securely managed sensitive data using **AWS Secrets Manager** to minimize risk and prevent unauthorized access.
- * Implemented network security controls using **VPC segmentation, private subnets**, and security groups to restrict unauthorized access.
- * Performed **kernel tuning** and system performance optimization using **sysctl** to improve throughput and reduce latency in production systems.
- * Automated vulnerability scanning and patching using AWS Inspector and GCP Security Scanner, identifying and resolving **90%+** of critical vulnerabilities.
- * Built and maintained AWS infrastructure (**EC2, S3, Lambda, CloudWatch, ECS, EBS, Fargate, AWS Batch, ECR, SQS, SNS**), ensuring high availability and scalability.
- * Configured and maintained reverse proxy setups and SSL termination using **NGINX** with HTTPS (**TLS certificates via Let's Encrypt**).
- * Spearheaded the organization's end-to-end **SOC 2 Type II** compliance journey by establishing security controls, risk management processes, documentation workflows, and audit readiness procedures.
- * Identified, mitigated, and neutralized a high-severity cyber attack that could have caused **USD 60,000** in financial losses, implementing immediate remediation procedures and long-term security hardening.
- * Implemented enterprise-grade DevOps practices, including **CI/CD pipelines, automated monitoring, IaC (Infrastructure as Code)**, and security-first deployment standards.
- * Worked closely with clients across multiple regulated sectors—including insurance, healthcare, and banking—such as **Canara HSBC Life, Tata Capital, ICICI Bank, Kotak Mutual Fund, Al Wadha Insurance (UAE), and SEHA (UAE)**, ensuring secure, compliant, and scalable infrastructure solutions.
- * Represented the organization at **GITEX 2025** as an official visitor, participating in global technology discussions and exploring emerging innovations relevant to the company's cloud, security, and DevOps roadmap.

DevOps Engineer

Jan 2023 – Sept 2025

Enpointe IT Services Pvt Ltd

Mumbai, Maharashtra, India

- * Managing cloud infrastructure like **AWS, OCI and Hetzner** and configuration, security, and maintenance of Servers to ensure reliable and secure operations with **0 breaches**.
- * Utilized **Docker** for consistent application environments and **Kubernetes** for scalable, high-availability deployments.
- * Delivered a multi-region, failover-capable infrastructure supporting **8,000+ devices** globally, ensuring uninterrupted service delivery and enhanced user experience. Additionally, developed a custom embedded Linux distribution for digital signage.
- * Designed and developed scalable **RESTful APIs** and user interfaces using modern frameworks, improving performance and reducing page load times by **30%**.
- * Administered and maintained Linux servers (**Ubuntu, Debian, CentOS**) across both cloud (AWS/OCI/GCP) VMs as well as bare-metal servers (Hetzner), ensuring high availability and performance.
- * Managed **disk partitions, LVM, and file systems**, including backup and recovery procedures.
- * Conducted Vulnerability Assessment and Penetration Testing (VAPT) on live production systems including **cinopolisindia.com, cinopolis.com, outlookindia.com, and Gemini Power Hydraulics**
- * Defined and monitored SLOs and SLIs, improving service reliability and reducing incident rates by **40%**.

- * Automated routine administrative tasks using **Bash scripting**, reducing manual effort and improving operational efficiency.
- * Successfully reduced server costs by **50%**, by leveraging containerization (Docker), server scaling strategies, and migration to cost-effective cloud solutions.
- * Built automated **CI/CD pipelines**, reducing deployment time to minutes and ensuring **99.99%** uptime with failover-ready, self-healing infrastructure.

PROJECTS

AiVANTA - Personalized Video Solution | *Python, Docker, MySQL, Git, FastAPI*

- Improved overall page load time by up to **60%** through optimized caching layers, CDN integration, database query tuning, and front-end asset compression.
- Designed and deployed a high-performance caching strategy using **Redis**, **significantly reducing backend load** and improving response times.
- Broke down a monolithic application into **scalable microservice-based RESTful APIs**, enabling independent deployments, faster development cycles, and increased system reliability.
- Enhanced API performance by implementing rate limiting, request batching, and optimized load balancing configurations.
- Introduced **Infrastructure as Code (IaC) using Terraform** to standardize and automate cloud resource provisioning.

Digital Signage Solutions | *NestJS, Redis, ElectronJS, NodeJS, Python, FastAPI, PostgreSQL, Docker, Git*

- Created dynamic digital signage solutions using **NestJS, ElectronJS, and NodeJS** to deliver scalable, real-time content management systems.
- Developed high-performance **RESTful APIs using FastAPI and NodeJS**, enabling seamless communication between devices and the central server.
- Leveraged **ElectronJS** to build cross-platform desktop applications, enabling centralized control over digital signage devices across multiple operating systems.

Meetmemo AI | *Python, Selenium, Docker, MySQL, Git*

- Leveraged **Selenium** for automated web scraping, gathering data from various web sources to support AI model training.
- Designed and maintained **MySQL databases** to store user data, meeting records, and AI-generated insights.
- Optimized the application's scalability and performance, ensuring it could handle large-scale data for meeting.

TECHNICAL SKILLS

Programming: Python (Automation and Integration), Bash, SQL (Postgres & MySQL), JavaScript

Databases: MySQL, Postgresql, MongoDB, SQLite

Queuing Systems: Redis, Kafka, AWS SQS

Cloud & Infra: AWS, OCI, GCP, Hetzner, Kubernetes, Docker, Terraform, Ansible, Jenkins, Github Actions, Gitlab CI/CD

SRE Practices: SLO, SLI, Incident Management, Chaos Engineering, VAPT, CIS Benchmark, AWS Security Hub

Monitoring and Observability: Grafana, Prometheus, Loki, Datadog

Web Technologies: REST APIs, SOAP, Apache, Tomcat, Nginx

Tools: VS Code, Postman, Sentry, Claude Code, Cursor.
